

Inter-RIR transfers

Soon to be called 2012-02

James Blessing, Sandra Brown,
Remco van Mook

Summary

Simple inter-RIR transfers

No new rules

Definitions

Originating LIR: The LIR that the IPv4 address space is transferring away from;

Originating RIR: The RIR responsible for the service region in which the Originating LIR is present;

Originating Policy: The current and relevant address policies within the Originating RIR service region at the time of the transfer;

Destination LIR: The LIR that is receiving the transferred IPv4 address space;

Destination RIR: The RIR responsible for the service region in which the Destination LIR is present;

Destination Policy: The current and relevant address policies within the Originating RIR service region at the time of the transfer;

Transferring TO the NCC service region

1. The transfer is in line with Originating Policy;
2. The Destination LIR is qualified to receive the transferred IPv4 address space as outlined in the policy for transfers within the RIPE NCC service region;
3. There must be an inter-RIR IPv4 transfer policy in effect in the Originating RIR service region at the time of transfer.

Transferring FROM the NCC service region

1. The transfer is in line with Destination Policy;
2. Originating LIR and the IPv4 address space transferred are in compliance with the policy for transfers within the RIPE NCC service region;
3. There must be an inter-RIR IPv4 transfer policy in effect in the Destination RIR service region at the time of transfer.
