  - Eric van Uden, AVM

- IPv6 Profile for the German Public Administration

  - Tahar Schaa, Cassini

- Replacing ripe-501

  - Jan Zorz, Sander Steffan and others

- AOB?

RIPE

Let's go :)

Ripe-501 Where Did it Start

- Original document was sourced from the Slovenian government and Go6

- Translated by some volunteers with help of the RIPE NCC

- Pretty much a literal translation

- Presented at RIPE 61 in Rome

- Pushed out pretty quickly because there was a lot of demand and not many comments

Replacing ripe-501

- There was a discussion at RIPE 62 about some things that should be changed:
    - Reference some new documents
    - Add some new profiles for CPE and mobile devices

- Updating a RIPE Document means replacing it

Where Are We Now?

- A draft replacement was cycled to the mailing list and put in last call just before RIPE 63

- During the meeting some suggestions for improvement were made

- Authors decided to edit the draft based on that feedback

RIPE

Where do we go from here?

- Draft document will be on the website soon

- Document is not subject to the PDP

- Do we need to have a review cycle?

- Should we issue a last call?

Discuss

See you all in Amsterdam

RIPE
