2012-01
Inter-RIR Transfers

Sandra Brown

Purpose Of 2012-01

- Allow transfer of IPv4 addresses to / from other RIR's
- Supplement the pool of IPv4 addresses available to the RIPE region
- Provide access to IPv4 addresses should companies in the RIPE service region need them
- Ensure the RIPE IPv4 database accurately reflects IPv4 transfers

Body of Proposal

- The RIPE NCC will recognize inter-RIR IPv4 address transfers only when the counterpart RIR has an inter-RIR transfer policy that permits the transfer of address space between the RIPE NCC service region and its own region.

- The RIPE NCC will process and record IPv4 address transfer requests between current RIPE NCC account holders and organizations in other RIR regions subject to the following conditions.

RIPE

Conditions

- ## On Space
  - /24
  - Authentic holder

- ## On Source
  - Defined by the RIR where block is held

- ## On Recipient
  - Defined by the RIR where block is held
  - When in RIPE NCC, affidavit from signing officer that will not be re-transferred in 15 months, for operational purposes, conform with anti-spam directive

Feedback Received

- Notion that Inter-RIR transfers should simply follow the same rules as intra-RIR transfers

- Preference for use of the word "transfer" rather than "sale"

- Why limit re-transfer period to 15 months

- Why minimum transfer block /24

RIPE

Path Forward

- Withdraw 2012-01

- Simplify Inter-RIR Transfer Proposal with 2012-02 which Remco will now present

- Introduce 2012-03 to make Timeline Amendments for all Transfers
    - No limitation on the period of use which is transferred
